SEQUELIZE

- some usefull cli-commands

- sequelize db:create
- sequelize model:generate
- sequelize db:drop
- sequelize db:create
- sequelize db:migrate (:undo(:all))
- sequelize seed:generate
- sequelize db:seed:all
- sequelize db:seed --seed name
- sequelize seed:undo (:all)
- sequelize db:migrate:status

```
'use strict';

/* import bcrypt */
const bcrypt = require('bcrypt');

const {
  Model
} = require('sequelize');

/* export model definition User */
module.exports = (sequelize, DataTypes) => {
  class User extends Model {
    /**
     * Helper method for defining associations.
     * This method is not a part of Sequelize lifec
     * The `models/index` file will call this metho
     */
    static associate({ Userrole, Userdatainfo, Qual
      // define association here

      this.belongsTo(Userrole, { foreignKey: "usern
      this.belongsTo(Userdatainfo, { foreignKey: "u
      this.belongsToMany(TrainingGroup, { through:
      this.belongsToMany(Qualification, { through:
      this.hasMany(Event, { foreignKey: "trainer_id
      this.belongsToMany(Event, { through: "user_at

    toJSON() {
      return { ...this.get(), id: undefined };
    }
  }

  User.init({
    id: {
      type: DataTypes.INTEGER,
      autoIncrement: true,
      primaryKey: true,
      allowNull: false
    },
    uuid: {
      type: DataTypes.UUID,
      defaultValue: DataTypes.UUIDV4,

      allowNull: false
    },
  }, {
    sequelize,
    modelName: 'User',
  });
};
```

NODEJS-SEQUELIZE-MYSQL

- sequelize is translation layer between nodejs and the db
- define model objects
- define model associations
- no raw query strings (select * from...)
- migrate to db
- possibility to setup seeders
- possibility to nest objects
- single language (js in our case)

./SRC/PROJECT

./SRC/PROJECT/BCRYPT

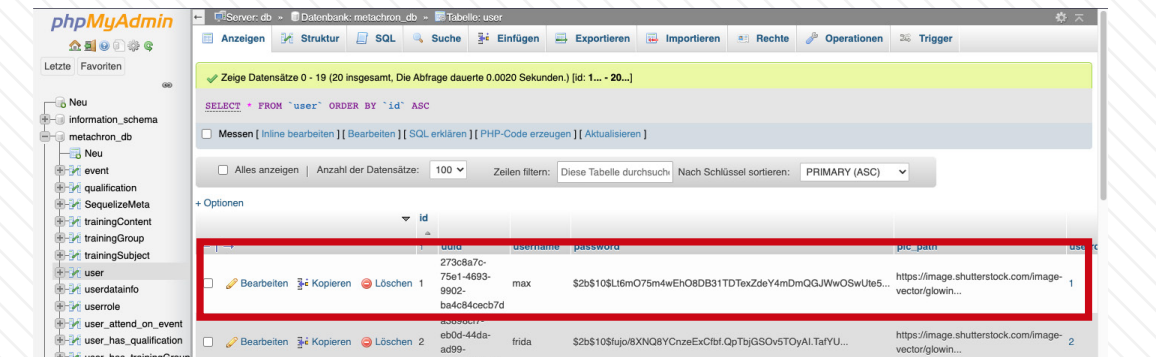

SECURE INFORMATION

node.bcrypt.js

- bcrypt to hash information to db
(for example password)
(in our case saltrounds = 10)
